

State of the Mobile Web, April 2009

May 27, 2009

In May of 2008 we issued our first State of the Mobile Web. That first report looked at the previous first quarter of 2008. We had two highlights: one highlighting social networks on the mobile Web and one bullet chronicling the decline and fall of WAP. We also introduced the top 10 sites snapshot.

Today we are pleased to say that our State of the Mobile Web is, by almost any measure, the definitive guide to the preferences of more than 20 million mobile Web consumers. If you want to know which handsets are the most popular in the U.S., we can tell you. What social networking site is number one for mobile Web users in Nigeria? Well, that's in here too. Our report aspires to provide more data every month and this month is no exception.

We're pleased this month to give our first highlight on mobile operators' data usage. Our figures are aggregated by country, but they paint a picture of how Opera Mini drives data usage for operators in our top 10 countries.

We found some interesting facts. Opera Mini users in Ukraine consume the most mobile data in part because they view the most pages. Because we compress that data to just a fraction of its true size, we can keep the mobile Web experience fast and responsive for consumers, while reducing strain on operator networks.

Also interesting to note is that U.S. users of Opera Mini view the most data-intensive pages. This is another sure sign that consumers expect One Web. They want to view the same sites and use the same data-intensive services on the mobile Web as when they sit at their computer.

This month we also looked at the mobile Web trends in Africa, which we last profiled in our September report. Libya saw usage rise 4,155% since April 2008. Nigeria, which joined the worldwide top 10 countries this month, saw usage grow 2,353% over the past year.

Enjoy this month's report and our ever-expanding coverage of the mobile Web.

Kind Regards,

Jon S. von Tetzchner, CEO, Opera Software

Highlights

- Nigeria continues to surge, pushing past Poland and taking the #9 spot.
- The top 12 countries using Opera Mini in Africa are South Africa, Nigeria, Egypt, Kenya, Libya, Zambia, Tanzania, Cote d'Ivoire, Mozambique, Namibia, Ghana and Gabon.
- Some numbers regarding Africa: From April 2008 to April 2009, overall page views in the top 12 countries listed increased 422%. From April 2008 to April 2009, overall unique users in the top 12 countries listed increased 169%. From April 2008 to April 2009, overall data transferred in the top 12 countries listed increased 348%.
- Since our last spotlight on Africa, Nigeria jumped from #4 to #2 and Zambia jumped from #9 to #6. Mozambique, Namibia, Ghana and Gabon are new to the spotlight.
- Growth rates continue to soar in Africa--especially in Libya, with 4,155% user growth since April 2008, and Nigeria, with 2,353% user growth since April 2008. Kenya leads the top 12 countries in page views, with each user browsing 372 pages on average each month.
- Google is #1 or #2 in each of the top 12 African countries, surpassed only by Facebook in a few instances. The trio of Google, Yahoo, and Facebook take the top 3 spots (in various orders) in 8 out of the 12 countries. Wikipedia is also strong, making the top 10 list in 10 out of the top 12 countries.
- Nokia and Sony Ericsson handsets are dominant in Africa, but Samsung is a significant exception, boasting the most popular phone used by Opera Mini users in South Africa, as well as Zambia, Namibia and Gabon.
- In Part 4 of this month's report, we took a closer look at the data usage Opera Mini drives in the top 10 countries.
- Customers of U.S. operators view more data-intensive pages than subscribers in any other country. The average page viewed over U.S. operator networks is approximately 32 KB compressed or almost 320 KB uncompressed.
- Operators in Ukraine were the big winners. Their customers each view on average 582 pages per month. Ukraine operators also sport the highest data transfer per user at more than 10 MB per month compressed. This is as much as 100 MB of mobile data per user uncompressed.

Part 1: Growth

Number of Users

In April 2009, Opera Mini had over 23.4 million users, a 1.5% increase from March 2009 and more than 140% compared to April 2008.

Pages Transcoded

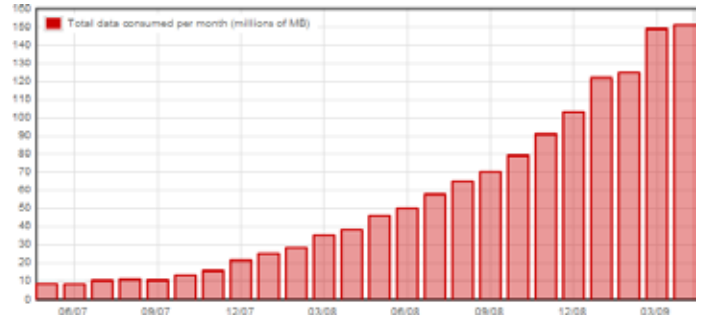

Opera Mini users viewed nearly 8.7 billion pages in April 2009. Since March, page views have gone up 0.7%. Since April 2008, page views have increased 249%.

Pages transcoded by Opera Mini per month (billions)

Data Consumed

In April 2009, Opera Mini users generated more than 151 million MB of data for operators worldwide. Since March, the data consumed went up by 1.4%. Data in Opera Mini is compressed up to 90%. If this data were uncompressed, Opera Mini users would have viewed up to 1.4 PB of data in April. Since April 2008, data traffic is up 295%.

Total data consumed per month (millions of MB)

Part 2: Country snapshots for April 2009

Snapshot: Russia

Page-view growth since April 2008: 205.5% - Unique-user growth since April 2008: 82.9% - Page-views per user: 416

Part 4: Data usage by country

This data is an aggregate of the combined operator statistics for each country. Page Views/User, Data/User and Data/Page will vary for each individual operator.

- Customers of U.S. operators view more data-intensive pages than subscribers in any other country. The average page viewed over U.S. operator networks is approximately 32 KB compressed or almost 320 KB uncompressed.
- Operators in Ukraine were the big winners. Their customers each view on average 582 pages per month. Ukraine operators also sport the highest data transfer per user at more than 10 MB per month compressed. This is as much as 100 MB of mobile data per user uncompressed.

Country	Page Views/User	Data (MB)/User	Data (kB)/Page
Russia	416	7.47	18.39
Indonesia	366	4.17	11.66
China	277	2.71	9.99
Ukraine	582	10.18	17.91
India	384	7.70	20.55
South Africa	237	4.79	20.73
United States	198	6.20	32.07
United Kingdom	217	4.83	22.77
Nigeria	313	3.98	13.00
Poland	172	5.29	31.57
